

NOTICE 29/20

Date: 17 September 2020

Subject: Improvement and renewal of BME Exchanges SMART platform

As announced in our previous notice dated July 3, 2020, BME is executing a project for the renewal and improvement of the SMART Trading System used in the different Market segments managed by BME.

Following this notice there is a new calendar that remains as follows:

- 1) October 19, 2020 (not changed): Launch in the MEFF Test environment of the new order entry and management binary interface.
- 2) November 23, 2020 (changed): Launch in the MEFF Production environment of the new software architecture and servers of the SMART System for MEFF.
- 3) November 30, 2020 (changed): new binary messaging protocol will be made available in MEFF Production environment to Members with regard to public information messages on market data. It is reminded that this launch only affects those entities that wish to operate with the new protocol, since the current protocols based on FIX are maintained and have continuity.
- 4) January 11, 2021 (not changed): Launch in the MEFF Production environment of the new order entry and management binary interface. Just a reminder that this step will only affects those entities that wish to operate with the new protocol, since the current interfaces based on FIX protocol are also maintained.
