ANNEX 2

STRATEGY TYPES

General concepts:

- **Volume, unit of measure:** Each strategy has a standardized amount for each leg that composes it. So, a 10-11 Call spread will imply buying a call with strike price 10 and selling a call with a strike price of 11. The amount entered represents how many units to be bought or sold in the strategy. Thus, a purchase order on a 10-11 Call Spread with a volume of 100, represents the desire to buy 100 call options with strike price 10 and to sell 100 call options with strike price 11.
- **Underlying of the hedged strategies:** when the strategy is options on single stocks, the delta will be the underlying stocks. When the strategy is on IBEX 35 Options, the delta is the Mini IBEX Future. The cash trade will always be managed by the entity that each Member has set up by default to manage its stock options exercises. In the case of strategies traded in the Preagreed Trading System and RFQ System, the share hedging transaction will be managed by the entity that is designated in each case.
- **Number of underlying traded in the strategy:** When a hedging strategy is requested, the system prompts the user to enter the number of shares / Mini IBEX Futures that must be traded against each unit of strategy. The user must take into account the multiplier of the option for this. Thus, an option with a 110 multiplier and a 50% delta will require the user to enter an amount of 55 shares per unit of strategy traded.
- **Lots in strategies with hedge:** These types of strategies have to be traded in lots. The system will calculate the minimum number of options to be exchanged for each unit of the underlying. The orders entered in these strategies have to be for a volume that is a multiple of this lot. For example, if the lot of a strategy is set at 20, the buying or selling orders entering the book will be of a volume of 20, 40, 60, 80 or any multiple of 20.
